

Sprint 1 Plan

Goal: To add persistent server-side user collections.

User Story 1

As a user I would like to create an account

Task	Location	Hours	Team	Status
Use Google API to build login page	Backend	2		
Setup firebase	Backend	2		
Build ui for profile page	frontend	6		
Account and firebase is connected	backend	4		

User Story 2

I would like to be able to customize my profile with specific workouts and lifting numbers

Task	Location	Hours	Team	Status
Build a profile with my workouts and numbers	frontend?	4		
Implement list style of adding workouts	backend	4		
Take a profile picture or take straight from gallery	Model	6		
Setup times for my preferred workout	Model	3		
Fitness level and experience	Frontend	2		

User Story 3

See all other profiles

Task	Location	Hours	Team	Status
Ui to see list of all the profiles	Model	5		

Filter the list by experience/workout types	something	3
