

Installation Guide/User Manual for Lyfter

Overview: Lyfter is an Android App for Android users, which helps to plan and notify you of your workout schedule.

Installation: Download and run Android Studio - <https://developer.android.com/studio/>

1. Manual Download

- Go to app location on github - <https://github.com/calvinklu/lyfter115>
- Download ZIP of application
- Unzip folder
- Open Android Studio and start a new project
- Go to File → New → Import Project
- Find the project and click OK.
- Allow the gradle to build (this may take a few minutes)
- Run the app (Shift + F10)
- If no virtual devices is setup, click on Create New Virtual Device
- Select Pixel 2 XL and click Next
- Select any system image (Pie, Oreo, etc), this will take time to download as well
- Click Next → click Finish
- A virtual device should appear under Connected Devices when you try to run the app again
- Select virtual device (Pixel 2 XL API 28) and click OK
- The app will build again (will take a few minutes) and an emulator will popup
- Once the app is done building, run the app
- Select virtual device
- The Lyfter app should automatically load up on the emulator
- Lyfter is now ready for use.
